Design Engineering's index for 1982

Assembly

Fasteners and adhesives: ideas to improve products — Mar p11
Stock springs cut costs — Sept p11
Automated systems help firms compete — Nov p22

Careers

The 1982 job market — Jan p40
Should you change jobs during tough times? — Mar p52
Employment interviews: knock-out factors — May p72
Job hunting in a bust economy — Jul p100
Relocation counselling: is it for you? — Sep p36
Job hunting: the sub-professional job dilemma — Nov p36

Design Office

CAD/CAM in the 1980s: technological trends, industrial applications — Feb p17
Interactive graphics systems improve drafting room output — Feb p23
Efficient design departments: keeping abreast of current design aids — Feb p34
Simple methods for ergonomic design — Apr p31
Mock-ups for ergonomic design — May p42
Six ways to use bellows in vacuum — Jun p22
Styling the product—1 — Aug p15
Styling the product—2 — Sep p23
How CAD/CAM can improve job shop productivity — Nov p18

Electrical and electronic

The new electronics: a widening range of uses — Jan p16
Innovative ideas in switches and relays — Jan p19
New interface loop links computer and peripherals in highly portable system — Jan p27
CAD/CAM in the 1980s: technological trends, industrial applications — Feb p17
Interactive graphics systems improve drafting room output — Feb p23
Dual purpose connectors widen appeal of fiber optics for electronic applications — Feb p29
Efficient design departments: keeping abreast of current design aids — Feb p34
New laser coding system identifies arrow shafts — May p40
Drive ideas for system designers — Aug p12
How CAD/CAM can improve job shop productivity — Nov p18
Automated systems help firms compete — Nov p22
Manufacturers continue to produce more effective electric motors and controls — Dec p11
'Specials' design program tailors timers to needs — Dec p22
An overview: programmable controllers and robots in automated factories — Dec p24

Fluid power

Recent advances in seals and packings — Mar p18
B.C. Hydro: designing for efficient power generation — Jul p14
Computer eases design of hydrostatic systems — Jul p17
Canada's Fluid Power and Controls Buyers' Guide 1982/1983 — Jul p19
Drive ideas for system designers — Aug p12

Materials

Steel bar forging: hot, cold or warm? — Feb p42
Recent advances in seals and packaging — Mar p18
Materials offer new ways to solve design problems — Apr p18
Composites show potential for cryogenic applications — Apr p23
Lead keeps it quiet by land, sea and air — Apr p26
Six ways to use bellows in vacuum — Jun p22
What you should know about steel wire skeletonizing — Jun p40
Bimetallic wire widens range of design options — Aug p18

Mechanical power transmission

Advances in bearings meet changing needs — Jun p14
A "smorgasbord" of bearings for the automotive market — Jun p20
Drive ideas for system designers — Aug p12
Flexible couplings: matching the design to the application — Oct p13
New toothless gear drives now undergoing evaluation — Oct p18
Mechanical Power Transmission Buyers' Guide 1982/1983 — Oct p21

Miscellaneous

Design Engineering Conference has something for everyone — Mar p22
Lots to see at the 1982 Design Engineering Show! — Mar p29
The Canadian Design Engineering Show in Print — May p11
Winners for 1982 honored by Design Canada Awards — May p36
Canadian CAD/CAM exposition and conference preview — May p46
Perforated wing could cut aircraft fuel consumption — Jun p37
High technology products place increasing demands on industrial designers — Aug p8
The Pick of the Products, 1982 — Sep p15
New caisson-retained island is designed for offshore drilling — Nov p14

Design Engineering's index for 1982

Assembly

Fasteners and adhesives: ideas to improve products — Mar p11
Stock springs cut costs — Sept p11
Automated systems help firms compete — Nov p22

Careers

The 1982 job market — Jan p40
